

Nursing 360° modules

MODULE 1: The why

The famous leadership and public speaker, Simon Sinek says in order to get the most out of your life, you have to start with the “WHY”? Only after you answer this question will you be able to answer the “HOW?” or the “WHAT?” In this module, you will watch multiple videos on why nurses chose nursing and the fulfillment they have found in the nursing profession.

MODULE 2: Academic pathways

We are talking more than just a career ladder: CNA—LPN—RN/ASN—RN/BSN—Masters—Doctorate. In this module you will learn all about what it takes to navigate this rewarding adventure.

MODULE 3: Salaries, job outlook, places to work

Everyone seems to ask this question, “How much money will I make?” We hope you find nursing as more than a job or even a career. We hope you are inspired to find nursing as a calling. In this module, you will investigate salary ranges, job outlook, and places you could find yourself working.

MODULE 4: The specialties of nursing

In Dr. Seuss’s book “Oh the Places You’ll Go”, the author describes all the adventure that is ahead of you. Nursing is similar in that sense. There are so many “places you’ll go!” In this module you will discover so many specialties specific to the nursing profession.

MODULE 5: The Q and A

Inquiring minds want to know; And everyone should have inquiring minds. In this module you will spend some time visiting with nurses and nurse faculty to answer any questions you may have.

‘To do what nobody else will do, in a way that nobody else can, in spite of all we go through, is to be a nurse.’

Nursing 360°

**Your success in
nursing starts here!**

Nurses are the heartbeat of health care. They tend to patients at the bedside, work collaboratively with other health care providers, and communicate important information to patients and their families to help ensure the best possible outcomes.

The role of a nurse also varies widely—there are a number of career paths nurses can choose depending on their aims and passions. Some positions require more education and training. Others provide opportunities to work with unique patient populations from the elderly to infants.
